

Yardney Cell Venting Temporarily Closes Facility

Pawcatuck, CT USA - On Tues, 23 September an overheat condition detected by the automated sprinkler system at Yardney closed the facility for four hours. The incident was located in the Lithion testing area. All safety procedures performed as designed and no injuries occurred. The fire department, DEP, Stonington Police and hazmat crews responded quickly and appropriately. Yardney management was on site working diligently till early morning Wednesday with all to assist with closure of any further risk to personnel, the facility and neighbors. All Yardney employees reported to work Wednesday as operations were back on line. There was no major structural damage as the incident was contained in a concentrated area. Investigation into the incident and the cause is under way.

There was no foreseen impact on operations or meeting existing or pending orders.
